Model G20 Summit 2027

STUDY GUIDE

Hosted at FLAME University, Pune · 18 to 20 June 2027

Arrive by the evening of Thursday 17 June, leave Monday 21 June

Sherpa track

Energy Transitions

Who should refine the world's critical minerals: the countries that mine them, or new plants in the countries that buy them?

AT A GLANCE

94%

Share of battery-grade graphite refined in China, IEA figures cited by the Bank of Finland[1]

73%

Share of the world's mined cobalt from the Democratic Republic of the Congo in 2025[2]

Over US$40 billion

Indonesia's nickel exports in 2025, up from about US$3.3 billion in 2017 to 2018, after it stopped exporting ore[3]

YOUR GROUP MUST DECIDE

1. Whether producer countries may require minerals to be refined at home
2. Whether buyer countries should build refineries of their own, and who pays
3. Who finances and owns new refineries
4. What members may do with export bans, quotas and controls on minerals
5. Which standards and tracing rules apply
6. Who reports progress, and by when

FIVE TERMS TO KNOW

Critical minerals
Minerals that are essential inputs for energy security, manufacturing and digital technology[4].

Refining
Turning mined or recycled material into refined or upgraded forms factories can use[5].

Beneficiation
Processing minerals near where they are mined, so that more of their value stays there.

Export control
A rule that limits sales abroad, or allows them only with a licence.

Stockpile
A store of a material kept for an emergency.

SECTION 1

Letter from the chairs

Dear delegates,

We will chair the Energy Transitions Working Group at the Model G20 Summit 2027. Our group asks one hard question: who should refine the world's critical minerals, the countries that mine them, or new plants in the countries that buy them?

Read this guide twice. The first time, read for the story of how a rock dug out of the ground becomes a battery, and why the step in the middle has become a contest between countries. The second time, read it as your member's negotiator and mark every line that helps or hurts your case.

In the room we will look for clauses that name who acts, what they do and by when. We will also look for delegates who bring a mining country and a buying country to the same text, and who can show a source for every claim they make.

Bring your white paper, your member's row from Section 8 and one draft clause. We look forward to meeting you at FLAME University in June.

Warm regards,

Your chairs, Energy Transitions Working Group

SECTION 2

How the G20 and this simulation work

The real G20

The Group of Twenty has 21 members: 19 countries and two regional bodies, the European Union and the African Union[6]. The African Union became a permanent member at the New Delhi summit in 2023[6]. Together the members account for around 85% of the world's economic output, over 75% of world trade and about two-thirds of its people[6].

The G20 began in 1999, after the Asian financial crisis, as a meeting of finance ministers and central bank governors[6]. Leaders first met in Washington DC in 2008, and they have met every year since 2011[6]. Each year one member holds the presidency and sets the agenda, helped by the members that held it before and will hold it after. These three are called the troika[6]. The United States took over the presidency on 1 December 2025 and cut the number of working groups from 16 to four[6]. The United Kingdom holds the presidency in 2027 and will host the Leaders' Summit in Manchester on 27 and 28 November 2027[7,8].

Two tracks

The G20 process is led by the sherpas, each leader's personal representative. The work runs in two tracks, the Finance Track and the Sherpa Track. Within the two tracks, working groups bring together officials from the members, invited countries and international organisations[6].

Agreement by everyone

In Houston in September 2026, the energy ministers' Pillar I text, on energy security principles, was issued as a Chair's Statement, and a note says it was agreed by all G20 members present except Brazil[9]. It is a separate text from the Critical Minerals Statement. In this simulation a text is agreed only when no member objects; the Rules of Procedure 2027 explain how.

This simulation

The Model G20 Summit 2027 is set in 2027, the year the United Kingdom holds the G20 presidency. The Model G20 secretariat chairs every working group, and the UK delegation is an ordinary member. All 21 members are seated in every group. Each group also has four invited seats for international organisations or guest countries; they take part in the debate but are not members. Model G20 is organised by One Young India and is independent of the G20 and of every G20 government.

Each working group is modelled on a group that has met in the real G20 in recent years, so delegates learn how the forum works. Your group negotiates one short text on its agenda. On Sunday afternoon the working groups' texts come together in the communiqué, which the Leaders' Session adopts by consensus at the closing ceremony. The Rules of Procedure 2027 explain how debate, amendments and the final text work.

This working group

The Energy Transitions Working Group is modelled on the real G20 group of the same name, which G20 leaders named in their 2024 declaration[10]. In 2023 the leaders took note of principles on critical minerals proposed by India's presidency[11]. In 2025 the declaration agreed under South Africa's presidency welcomed a G20 Critical Minerals Framework, which it called "a voluntary, non-binding blueprint"[12]. In 2026 the US presidency ran an Energy Abundance Working Group, with one pillar on critical minerals and supply chains[13]; the White House says G20 energy ministers agreed a Critical Minerals Statement in Houston[13].

SECTION 3

The issue explained

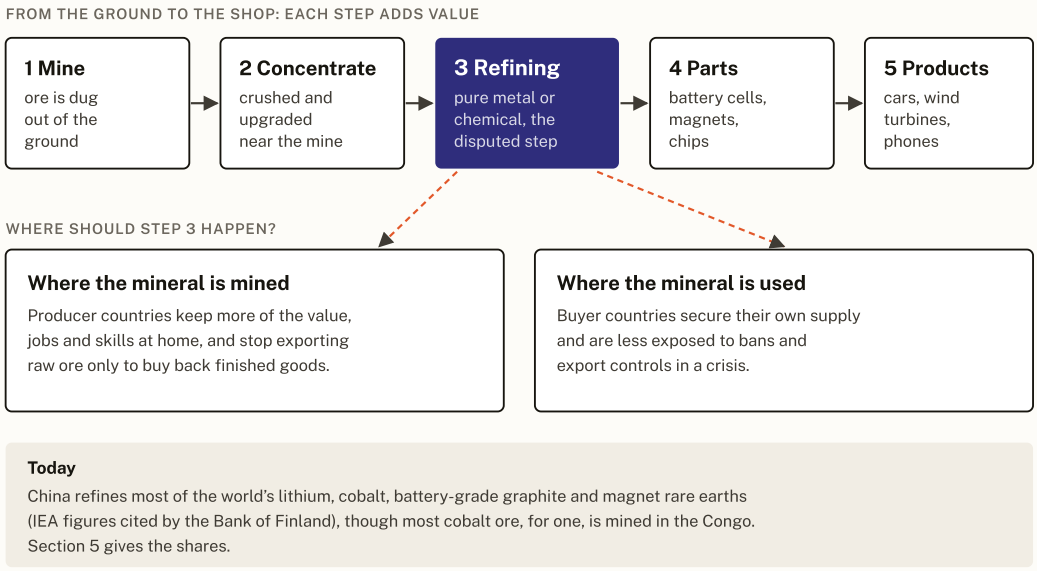

From the ground to a battery

G20 energy ministers call critical minerals essential inputs for energy security, manufacturing, digital infrastructure and new technologies[4]. Lithium, cobalt, nickel and graphite go into batteries, the rare earths into magnets, and gallium into chips[2].

Digging a mineral out of the ground and refining it are different steps. Refining is part of what the UK calls midstream processing: turning mined or recycled material into refined or upgraded forms that factories can use[5]. It needs a lot of money and a lot of energy[14]. Cobalt, for example, is mined as a by-product of copper and nickel, and is usually turned into a chemical, cobalt sulphate or oxide, before it goes into a battery[15]. Figure 1 shows the chain.

FIGURE 1 SECTION 3

The value chain of a critical mineral, and the two answers to where refining should happen.

Who mines and who refines

The countries that mine a mineral are often not the ones that refine it. The Democratic Republic of the Congo supplied about 73% of the world's mined cobalt in 2025, while China remained the leading producer of refined cobalt[2]. In 2021 the World Bank said almost all refined cobalt from the Congo was refined further in China or elsewhere[15]. IEA figures cited by the Bank of Finland put China's share of world copper, cobalt and nickel ore output at only 2% to 8%, though Chinese firms own many mines abroad[1]. Yet its share of refining is 74% for lithium, 76% for cobalt and 94% for battery-grade graphite[1].

The G20's own framework describes the result. Demand is concentrated in industrialised economies, while many developing countries rich in minerals struggle to capture a fair share of the value: they export raw materials and import finished products[16]. Buyer countries have their own gaps. In 2025 a US mine in Michigan sent its nickel concentrate to Canada or overseas to be processed[2], and the last US primary nickel refinery closed in 1985[2].

Why it became a contest

Producer countries want the refineries: South Africa's minister wants investors to process more manganese at home[17], and the African Union says Africa must move beyond raw mineral exports[18]. G20 texts now say the same. The leaders' declaration agreed under South Africa's presidency says critical minerals "should become a catalyst for value-addition and broad-based development, rather than just raw material exports"[12], and the G20 framework calls for local processing in producer countries[16]. Indonesia stopped exporting nickel ore and built a processing industry[3].

Buyer countries want to depend less on one supplier: the EU wants no more than 65% of its needs to come from any one outside country[19]. China tightened export controls on rare earths in 2025[2]. According to the Bank of Finland, the IEA estimates that full implementation of China's export

restrictions would put about US$6.5 trillion of yearly production outside China at risk[1], and IEA figures put European prices of gallium and of two heavy rare earths, dysprosium and terbium, at about five times China's domestic prices[1].

SECTION 4

What has happened so far

22 Nov 2019	The EU asks Indonesia for WTO consultations over its nickel export restrictions and processing rules[20]
30 Nov 2022	A WTO panel finds Indonesia's nickel export ban and processing requirement inconsistent with WTO rules; Indonesia appeals on 8 December[20]
22 Jul 2023	G20 energy ministers in Goa take note of India's principles on critical minerals[21]
Aug 2023	China starts export controls on gallium[2]
18 Nov 2024	G20 leaders in Rio back supply chains for minerals "beneficiated at source"[10]
Feb 2025	The Democratic Republic of the Congo bans cobalt exports for a time; quotas replace the ban in October[2]
Apr 2025	China tightens export controls on rare earths; it expands them in October and in November 2025 suspends the October controls for one year[2]
20 Oct 2025	The United States and Australia announce a framework on mining and processing critical minerals[22]
31 Oct 2025	Canada announces 26 investments and partnerships for critical minerals projects[23]
22 Nov 2025	The leaders' declaration agreed under South Africa's presidency welcomes the G20 Critical Minerals Framework[12]
16 Sep 2026	G20 energy ministers end their Houston meeting; the White House says they reached consensus on four outcomes, one of them a Critical Minerals Statement[13]
3 Nov 2026	Indonesia's energy ministry says the government is preparing to control nickel output so that prices recover[24]

What the G20 has already said

G20 leaders, Johannesburg Leaders' Declaration, agreed under South Africa's presidency, November 2025:

> *"Critical minerals should become a catalyst for value-addition and broad-based development, rather than just raw material exports."*[12]

The White House, 21 September 2026, summarising the Houston energy ministerial:

> *"Ministers agreed in the Critical Minerals Statement on voluntary cooperation to build resilient, affordable, secure, and diversified critical minerals value chains through information sharing, innovation, investment, capacity building, and local value addition."*[13]

SECTION 5

Facts that matter

FIGURE	VALUE	YEAR	REF.
China's share of refining (IEA figures, via the Bank of Finland)	lithium 74%, cobalt 76%, battery graphite 94%	2026 report	1
China's share of rare earth refining for magnets (IEA, via the Bank of Finland)	84%	2026 report	1
China's share of world natural graphite production	82%	2025	2
China's share of world low-purity gallium production	99%	2025	2
Congo's share of world mined cobalt	73%	2025	2
Indonesia's nickel mine output	2.6 million of the world's 3.9 million tons	2025	2
Chinese-owned share of Indonesia's nickel refining capacity (Bank of Finland)	about 75%	2026 report	1
Indonesia's nickel exports	from about US$3.3 billion to over US$40 billion	2017 to 2025	3
Chinese firms' investment in mines abroad (IEA, via the Bank of Finland)	roughly US$120 billion	2023 to 2025	1
European price of gallium and two heavy rare earths against China's (IEA, via the Bank of Finland)	about five times higher	2026 report	1
Congo's cobalt export quota	up to 96,600 tons a year	2026 and 2027	2
US rare earth compounds and metals imported from China	71%	2021 to 2024	2

SECTION 6

Core tensions

Refine where it is mined, or where it is used

For refining where it is mined. South Africa holds 37% of the world's manganese ore reserves, but only 2% is processed locally, its minister says[17]. The African Union says Africa must move beyond raw mineral exports and build value chains that encourage local beneficiation[18]. Brazil's mines ministry aims to develop mineral processing in Brazil[14]. Indonesia's nickel exports rose more than tenfold after it stopped exporting ore[3].

For refining where it is used. The EU aims to process at least 40% of its yearly needs at home by 2030[19]. The US government lent US$150 million for a plant in California to separate heavy rare earths[2]. The UK aims to use its strengths in recycling and midstream processing[5].

Export bans, or open trade

For bans and controls. Indonesia's minister calls processing at home the key to adding value to its natural resources, and its ban came with a fast rise in exports of processed nickel[3]. China's commerce ministry calls its rare earth controls a legitimate step under its laws, says it has taken note of the military uses of medium and heavy rare earths, and says it will grant licences to eligible applications[25].

For open trade. A WTO panel found that Indonesia's nickel ban and processing rule broke WTO rules[20]. Indonesia appealed, and with the WTO's Appellate Body not working, the EU considered the appeal's deadlines suspended[20]. The G20 framework also asks for "open non-discriminatory trade and diversified supply routes"[16].

Local refining, or local ownership

Refining at home is enough. Indonesia's minister says processing at home creates jobs and widens markets for value-added products[3].

Ownership matters too. As Indonesia shows, a plant in a producer country can still be owned by foreign firms: Chinese-owned firms control about 75% of Indonesia's nickel refining capacity, the Bank of Finland reports[1].

SECTION 7

Case studies

Indonesia's nickel ore ban

Indonesia mined about 2.6 million of the world's 3.9 million tons of nickel in 2025[2]. It stopped exporting nickel ore and built a processing industry, and its nickel exports rose from about US$3.3 billion in 2017 to 2018 to more than US$40 billion in 2025[3]. Chinese-owned firms control about 75% of its nickel refining capacity, the Bank of Finland reports[1]. The EU challenged the ban at the WTO in 2019[20]. In 2022 a WTO panel found the ban and the processing requirement broke WTO rules, and that Indonesia had not shown they were temporary measures against a critical shortage[20]. Indonesia appealed[20], and with the Appellate Body not working, the EU considered the appeal's deadlines suspended[20]. In November 2026 Indonesia's energy ministry said the government was preparing to limit nickel output so that prices recover[24].

What it shows. A producer can build refineries by keeping its ore at home, but the plants may belong to others, and the trade rules remain disputed. **Question for your group.** Should the G20 accept processing requirements like Indonesia's, and on what conditions?

China's controls on gallium and rare earths

China produced 99% of the world's low-purity gallium in 2025[2]. It began export controls on gallium in August 2023, banned all gallium exports to the United States in December 2024, and in November 2025 lifted that ban for one year[2]. On rare earths it tightened controls in April 2025, expanded them in October, and in November 2025 suspended the October controls for one year[2]. Check what has happened to both pauses since. Between 2021 and 2024, 71% of the rare earth compounds and metals the United States imported came from China[2].

What it shows. When refining sits in one country, its export rules can reach buyers far beyond its borders: in October 2025 China extended its rare earth rules to some goods made abroad, then postponed enforcement until 10 November 2026[1]. **Question for your group.** What should G20 members promise each other about export controls on minerals?

Buyer countries build their own refineries

The last US primary nickel refinery closed in 1985[2]. In 2025 three companies were considering or developing nickel refinery projects in Missouri, Oklahoma and Texas[2], and the US government has lent US$150 million for a rare earth separation plant in California[2]. In October 2025 the United States and Australia said they were taking measures to provide at least US$1 billion in financing to projects in each country within six months, under a non-binding framework[22]. The EU has set a goal of processing at least 40% of its yearly needs at home by 2030, and speeds up permits for selected projects[19].

What it shows. Buyers are rebuilding refining with public money[2,22]. **Question for your group.** Should buyer countries' refineries be built at home, or in partnership with producer countries?

SECTION 8

Country positions

One row for each of the 21 members. "Stake" and "On the record" come from official sources and state news agencies. "Our reading", in italics, is what we think that record suggests: test it in your research. Where the record is silent, the row says so. Every member except South Africa is on the list of participants Japan's Ministry of the Environment printed for the Houston ministerial in September 2026[26]; the White House's list of those present also leaves out South Africa[13]. Taking part is not a position. The label under each name shows the member's place in the record: producer, buyer, refiner, or not clear. Bring this section to the summit and tick each row as members speak.

MEMBER	STAKE	ON THE RECORD	OUR READING	MARK
Argentina PRODUCER	Its economy ministry says Argentina is the world's fifth-largest lithium producer, with 6 projects in production and more than 41 at advanced stages[27].	The ministry expects lithium exports, US$645 million in 2024, to pass US$11 billion by 2035, helped by an investment regime introduced in 2024[27].	***Pushes for:*** *Investment in its lithium mines.* *Not clear from the record: red line, allies. Research it.*	☐ Ally ☐ Opp. ☐ Swing

MEMBER	STAKE	ON THE RECORD	OUR READING	MARK
Australia NOT CLEAR	With the United States it said in October 2025 that it was taking measures to provide at least US$1 billion in financing to projects in each country, under a non-binding framework[22].	The US and Australia framework says the two will mobilise government and private support for projects through guarantees, loans or equity[22].	***Pushes for:*** *Partnerships with buyer countries.* ***Allies:*** *The United States.* *Not clear from the record: red line. Research it.*	☐ Ally ☐ Opp. ☐ Swing
Brazil PRODUCER	Its ministry of mines and energy says Brazil holds proven and expanding reserves of lithium, nickel, copper, graphite and rare earths[14]. The US Geological Survey estimates it mined 12,000 tons of lithium and 70,000 tons of nickel in 2025[2].	The ministry says the market needs "robust geographic diversification in the processing and refining stages", and aims to develop mineral processing in Brazil[14]. A note to the Houston Chair's Statement on energy security says it was agreed by all G20 members present except Brazil[9].	***Pushes for:*** *More refining in Brazil.* ***Allies:*** *South Africa, the African Union.* *Not clear from the record: red line. Research it.*	☐ Ally ☐ Opp. ☐ Swing
Canada PRODUCER	In October 2025 it announced 26 investments, partnerships and measures for critical minerals projects, with partners from nine allied countries, among them the United States and Australia[23].	It says working with international partners encourages more investment in Canadian mining and processing projects[23].	***Pushes for:*** *Investment in its own mines and refineries.* ***Allies:*** *The United States, Australia.* *Not clear from the record: red line. Research it.*	☐ Ally ☐ Opp. ☐ Swing
China REFINER	It produced 99% of the world's low-purity gallium in 2025[2]; IEA figures cited by the Bank of Finland put its share of lithium refining at 74% and cobalt at 76%[1].	Its commerce ministry calls its rare earth export controls a legitimate step to refine its export control system, and says it will grant licences to eligible applications[25].	***Pushes for:*** *Its right to control its own exports.* *Not clear from the record: red line, allies. Research it.*	☐ Ally ☐ Opp. ☐ Swing
France BUYER	In May 2023 it announced a critical minerals investment fund, with €500 million from the State, aiming to raise €2 billion[28].	The fund invests as a minority holder alongside industrial or mining firms, and aims to secure supplies from its projects for French and European industry[28].	***Pushes for:*** *Partnerships in mining and refining projects.* ***Allies:*** *Germany, the European Union.* *Not clear from the record: red line. Research it.*	☐ Ally ☐ Opp. ☐ Swing
Germany BUYER	In October 2024 KfW began setting up a raw materials fund on behalf of the federal government, to help the German economy secure access to strategic raw materials[29].	KfW says the fund covers mining, processing and recycling projects, usually with €50 million to €150 million each[29].	***Pushes for:*** *Secure supply through investment in mining, processing and recycling projects.* ***Allies:*** *France, the European Union.* *Not clear from the record: red line. Research it.*	☐ Ally ☐ Opp. ☐ Swing
India BUYER	In January 2025 its Cabinet approved a National Critical Mineral Mission, with Rs 34,300 crore over seven years[30].	The Mission covers exploration, mining, processing and recycling, with processing parks[30]. It removed customs duties on most critical minerals in its 2024-25 budget, which it says will encourage industry to set up processing facilities in India[30].	***Pushes for:*** *Processing at home.* *Not clear from the record: red line, allies. Research it.*	☐ Ally ☐ Opp. ☐ Swing

MEMBER	STAKE	ON THE RECORD	OUR READING	MARK
Indonesia PRODUCER	Its nickel exports rose from about US$3.3 billion in 2017 to 2018 to more than US$40 billion in 2025, after it stopped exporting ore[3]; it targets at least US$45 billion in 2026[3].	In November 2026 its ministry said it holds the world's largest nickel reserves and prepared to curb output[24]. It was the respondent in the EU's WTO case over its nickel rules[20].	***Pushes for:*** *The right to require processing at home.* ***Red line:*** *A text that rules out export bans.* ***Allies:*** *South Africa, the African Union.*	☐ Ally ☐ Opp. ☐ Swing
Italy NOT CLEAR	Its environment and energy security ministry says many critical raw materials are essential to renewable energy, electric mobility and digital technology[31].	No public statement on refining found. Research it.	*Not clear from the record. Research it.*	☐ Ally ☐ Opp. ☐ Swing
Japan NOT CLEAR	Its vice-minister for the environment took part in the Houston ministerial and held talks with five countries[26].	No public statement on refining found. Research it.	*Not clear from the record. Research it.*	☐ Ally ☐ Opp. ☐ Swing
Republic of Korea BUYER	Its foreign ministry says critical minerals are indispensable for semiconductors, batteries and electric vehicles[32].	Its foreign ministry announced in June 2024 that Korea would chair the Minerals Security Partnership for one year from 1 July[32], and in February 2025 Korea held talks on critical minerals with Tanzania, South Africa and Zimbabwe[33].	***Pushes for:*** *Partnerships with producer countries.* ***Allies:*** *South Africa.* *Not clear from the record: red line. Research it.*	☐ Ally ☐ Opp. ☐ Swing
Mexico NOT CLEAR	Its presidential decrees created a state body, Litio para México, and declared a lithium mining reserve zone[34].	No public statement on refining found. Research it.	*Not clear from the record. Research it.*	☐ Ally ☐ Opp. ☐ Swing
Russia NOT CLEAR	It took part in the Houston ministerial[26].	No public statement found. Research it.	*Not clear from the record. Research it.*	☐ Ally ☐ Opp. ☐ Swing
Saudi Arabia NOT CLEAR	It took part in the Houston ministerial[26].	Its news agency reports its industry minister stressing global partnerships to develop critical minerals supply chains[35].	***Pushes for:*** *Partnerships on supply chains.* *Not clear from the record: red line, allies. Research it.*	☐ Ally ☐ Opp. ☐ Swing
South Africa PRODUCER	Its minister says it holds 37% of the world's manganese ore reserves, but only 2% is processed locally[17].	He said the government would that year intensify its engagement with manganese producers and investors to invest in local beneficiation[17]. The G20 Critical Minerals Framework was issued under its 2025 presidency[16].	***Pushes for:*** *Refining where minerals are mined.* ***Allies:*** *The African Union, Indonesia, Brazil.* *Not clear from the record: red line. Research it.*	☐ Ally ☐ Opp. ☐ Swing
Türkiye NOT CLEAR	Its energy ministry says Eti Mining Operations built a pilot plant to process bastnaesite, a rare earth ore[36].	Its energy ministry says 80% of refined rare earth production is in China[36].	*Not clear from the record. Research it.*	☐ Ally ☐ Opp. ☐ Swing
United Kingdom BUYER	It holds the G20 presidency in 2027[7]. It expects demand for lithium to rise by 1,100% by 2035[5].	Its strategy aims to secure critical minerals and use its strengths in recycling and midstream processing[5], and says supply chains have become more concentrated[5].	***Pushes for:*** *Recycling and processing at home.* ***Allies:*** *The United States, the European Union.* *Not clear from the record: red line. Research it.*	☐ Ally ☐ Opp. ☐ Swing

MEMBER	STAKE	ON THE RECORD	OUR READING	MARK
United States BUYER	Its last primary nickel refinery closed in 1985, and it lent US$150 million for a rare earth separation plant in California[2]. It held the G20 presidency in 2026[26].	Its Interior Secretary said the Houston consensus supports "diversify supply, strengthen domestic and regional capacity" and respect for "each nation's sovereignty over its natural resources"[13].	***Pushes for:*** *Refining at home and with partners.* ***Allies:*** *Australia, Canada.* *Not clear from the record: red line. Research it.*	☐ Ally ☐ Opp. ☐ Swing
European Union BUYER	Its Critical Raw Materials Act sets 2030 goals of at least 40% of yearly needs processed in the EU and no more than 65% from a single outside country[19].	It brought the WTO case against Indonesia's nickel export rules[20].	***Pushes for:*** *Open trade in ore, and more refining at home.* ***Red line:*** *Export bans on ore.* ***Allies:*** *Germany, France.*	☐ Ally ☐ Opp. ☐ Swing
African Union PRODUCER	Its Africa Green Minerals Strategy is a roadmap for value addition at source and regional industry[18].	The strategy says Africa must move beyond raw mineral exports and build value chains that encourage local beneficiation[18].	***Pushes for:*** *Refining in Africa.* ***Allies:*** *South Africa, Brazil.* *Not clear from the record: red line. Research it.*	☐ Ally ☐ Opp. ☐ Swing

Invited seats (not members)

International Energy Agency. Estimates that Chinese firms invested roughly US$120 billion in mines abroad in 2023 to 2025, and that full implementation of China's export restrictions would put about US$6.5 trillion of yearly production outside China at risk (cited by the Bank of Finland)[1].

International Renewable Energy Agency. An invited seat; research its work on critical materials for the energy transition.

World Bank. Reported in 2021 that China refined 67% of the world's cobalt in 2019, up from 53% in 2015[15].

Democratic Republic of the Congo (mining guest country). The world's leading source of mined cobalt, which has used a temporary export ban and then export quotas[2].

The camps

Refine where it is mined

South Africa, Indonesia, Brazil and the African Union[3,14,17,18].

Refine where it is used

The United States, the EU and the UK[2,5,19].

Partnerships and funds

France and Germany fund mining, processing and recycling projects, France's fund also abroad, and Korea announced it would chair a 14-country minerals partnership[28,29,32]; the United States and Australia have their framework[22].

The main refiner

China[1,25].

SECTION 9

Options on the table

Each option is something the G20 can actually do: commit its own members, call on others, or ask international bodies to act and report. Who may back or resist each option is our reading of the record in Section 8, for you to test in your research.

A. Accept local processing requirements

What it is. G20 members accept that a producer country may require minerals to be refined at home, under agreed conditions. **Who runs it.** Each producer country. **Precedent.** Indonesia's processing requirement and ban on nickel ore exports, challenged at the WTO by the EU[20]. **For.** Indonesia's energy ministry says its nickel shows that resources bring far greater benefit when they are processed before they are sold[3]. **Against.** A WTO panel found Indonesia's measures broke WTO rules[20]. **May back it.** Indonesia, South Africa and the African Union. **May resist it.** The European Union.

B. Buyer countries fund refineries at home

What it is. Buyer countries lend to or invest in refineries on their own soil. **Who runs it.** Buyer governments and their banks. **Precedent.** The US government's US$150 million loan for a heavy rare earth separation plant in California[2]. **For.** It answers a risk the IEA puts at about US$6.5 trillion of yearly production outside China if China's export restrictions are fully implemented (cited by the Bank of Finland)[1]. **Against.** It does nothing for producer countries that want to refine their own ore[16]. **May back it.** The United States and the European Union.

C. Partnerships and regional processing hubs

What it is. Buyers and producers finance refineries in producer regions together, with development banks and export credit agencies. **Who runs it.** Members, export credit agencies and development banks. **Precedent.** The Houston Critical Minerals Statement says members may bolster partnerships through export credit agencies and multilateral development banks, and fund feasibility studies together[4]. **For.** It answers both sides of the question. **Against.** Partnerships are voluntary, and the statement commits no money[4]. **May back it.** Korea, which held minerals talks with three African countries, and France, whose fund also invests abroad[28,33].

D. Stockpiles

What it is. Members keep emergency stores of critical minerals, so that a ban does not stop their factories at once. **Who runs it.** Each member. **Precedent.** The Congo's cobalt quota for 2026 and 2027 sets aside 9,600 tons for national strategic reserves[2]. **For.** It buys time in a crisis. **Against.** Stockpiles do not change who refines. **May back it.** The United States and Australia, whose framework names US stockpiling infrastructure and Australia's Critical Mineral Strategic Reserve[22].

E. Standards, tracing and price floors

What it is. Shared standards and tracing for minerals, and trade at agreed minimum prices among members that adopt them. **Who runs it.** The members that sign up. **Precedent.** The G20 framework's call to develop tracing systems together and make them work with each other[16], and the US and Australia framework's plan for standards-based trade with price floors or similar measures[22]. **For.** A price floor can steady a producer: the US Department of Defense set a ten-year floor for some rare earth products to guarantee one producer's operational stability[1]. **Against.** Members outside the scheme may see it as a closed club. **May back it.** The United States and Australia[22].

SECTION 10

What the communiqué must answer

1 May producer countries require minerals to be refined at home, and on what conditions?

2 Should buyer countries build refineries at home, in producer countries, or both?

3 Who finances new refineries, and who owns them?

4 What may members do with export bans, quotas and controls?

5 Which standards and tracing rules apply?

6 Who reports progress, to whom, and by when?

DRAFT PARAGRAPH, AS AMENDED — WEAK, THEN STRONG

> ~~We recognise the importance of resilient critical mineral supply chains and encourage further cooperation.~~ We commit to finance, through our export credit agencies and development banks, at least one new refining project in a producer country for each new project we support at home, and to give six months' notice before any new export control on critical minerals. We call on the multilateral development banks to set up a joint facility for processing hubs in producer regions, and ask the World Bank to report progress to our Energy Ministers by October 2028.

WHO ACTS	WHAT	FOR WHOM	HOW LONG	WHO REPORTS
G20 members, and the development banks	*matched financing for refining; notice before export controls; a facility for processing hubs*	*producer countries and buyers*	*reported by October 2028*	*the World Bank*

The weak paragraph names no one and promises nothing. The strong one commits only G20 members and calls on everyone else. It is an example, not the answer: your group may decide on a different course, or on none.

SECTION 11

Preparation

Your white paper

Write at most 1,000 words, with numbered sources, and send it to your chairs by Monday 31 May 2027 (Rules of Procedure 9.2). Use five parts:

1. Your member's stake, in three numbers with sources.
2. Its position on each question in Section 10.
3. Its red lines: what it will not accept.
4. One draft paragraph in the style of a communiqué, beginning "We commit" or "We call on".
5. Your sources, numbered, official ones first.

Five questions to research for your member

1. Which critical minerals does your member mine, refine or buy?
2. Does it have a strategy, a fund or a law on critical minerals?
3. Has it used, or been hit by, an export ban or control on minerals?

4. What did it say at the Houston energy ministerial in 2026?
5. Which members are most likely to agree with it, and which one in the other camp could it win over?

Starter sources

POCKET CARD

Your first hour as a delegate

- [ ] **Roll call.** Hold up your placard and answer "present" when your member is called.
- [ ] **Opening speech.** Give your member's stake in one number, its position, and one thing it wants in the text.
- [ ] **Listen.** As members speak, mark their rows in Section 8: ally, opponent or swing.
- [ ] **First caucus.** Find two allies, one in your camp and one in the other.
- [ ] **By the break.** Bring one clause that names who acts, what they do, and by when.

SECTION 12

Glossary

Beneficiation
Processing minerals near where they are mined, so that more of their value stays there.

By-product
A material produced alongside the main product, as cobalt is mined with copper and nickel[15].

Cobalt
A metal used in many rechargeable batteries.

Concentrate
Ore that has been crushed and upgraded, but not yet refined.

Critical minerals
Minerals that are essential inputs for energy security, manufacturing and digital technology[4].

Export control
A rule that limits sales abroad, or allows them only with a licence.

Export quota
A limit on how much of a good may be sold abroad.

Gallium
A metal used in chips and electronics.

Graphite
A form of carbon used in batteries.

Lithium
A light metal used in batteries.

Ore
Rock dug out of the ground that contains a useful mineral.

Price floor
A minimum price agreed for a good.

Rare earths
A group of metals used in magnets for motors and wind turbines.

Refining
Turning mined or recycled material into refined or upgraded forms factories can use[5].

Stockpile
A store of a material kept for an emergency.
